***** ILLUSTRATED SPARE PARTS LIST *****

1. Sewing speed and rotating direction of pulley

The maximum sewing speed of this machine is shown at the table below.

To ensure long service life under good conditions, your new machine should be run lowered 15 - 20 % of the maximum sewing speed during the first 200 hours (approximately one month).

The rotating direction of the motor pulley① and the machine pulley② is clockwise as shown in the figure.

! CAUTION

If machine rotate in reverse, oil could not circulate.

It may cause the machine trouble.

Maximum sewing speed(s.p.m.)

AZ6004G	5500
---------	------

outside diameter of motor pulley (mm)	sewing speed of machine for	
	50 Hz	60 Hz
70	/	4600
75	/	5300
80	4700	/
85	5300	/

For your reference, the chart shows the out side diameters of the motor pulley and s.p.m. of the machine when using the clutch motor of 3-shape, 2-pole, 400W(1/2 HP).

A commercial pulley is provided at intervals of 5 mm in diameter.

The diameters on the chart are the nearest size to the calculated value.

! CAUTION

If a proper motor pulley is not used, machine sewing speed may exceed the maximum speed.

The machine may be troubled.

2. Proper operation

2-1 Needle system

AZ6004G : DC×1(or 81×1)

Depend on the weight and type of material to be sewn, the proper needle and size should be selected.

■Needle size

Japanese standard	11	12	13	14
Metric standard	75	80	85	90

2-2 Looper thread control for overedge stitch

The standard setting of each looper thread eyelet is as follows ;

- 1) Make the lower looper eyelet① and ② to be aligned.
- 2) Make the eye of lower looper thread pull-off③ to line up to the notch mark④ when the lower looper is at the rightmost of its stroke.

* Moving each thread eyelet and the thread pull-off to the direction "T" tightens thread tension and moving them to the direction "L" loosens thread tension.

3. Adjustment of sewing machine

WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

3-1 Needle height

1. Loosen the screws① and remove the logo plate②.
2. Remove the screw③.
3. Rotate the machine pulley and position the needle bar at the top dead point.
4. Loosen the screw④ on needle bar connecting bracket and adjust the position of needle bar by moving it up and down.

《AZ6004G》

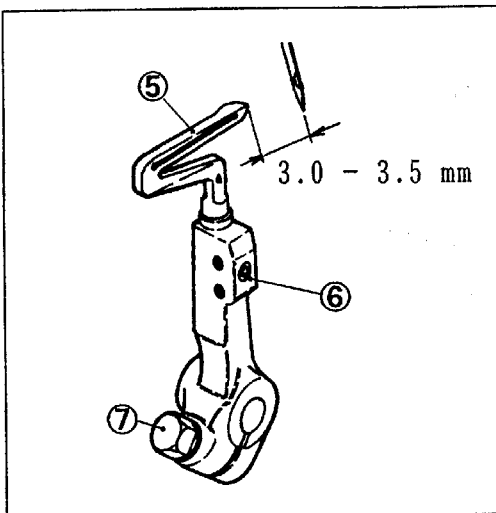

The needle height adjustment is made by locating the needle at the top of its stroke and setting the distance 12.4 - 12.8 mm from the tip of needle to the top of stitch plate.

CAUTION

The tightening torque of screw on needle bar connecting bracket is 1.5N·m(15kgf·cm).

3-2 Distance between needle and lower looper

Loosen the screw⑦ on lower looper holder, rotate the machine pulley clockwise and adjust the lower looper⑤ to make the distance of 3.0 - 3.5 mm between the tip of lower looper and the center of needle when the lower looper is at the leftmost of its stroke.

3. Adjustment of sewing machine

WARNING

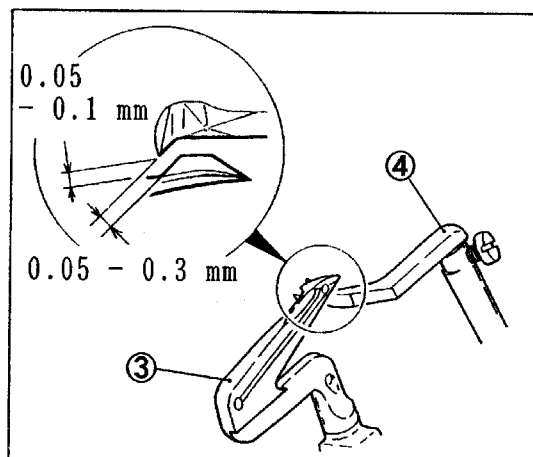

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

3-3 Timing between needle and upper spreader

Loosen the screw ② on upper looper crank. Rotate the machine pulley clockwise and adjust the upper spreader to make the distance of 5.5 - 6.5 mm between the tip of upper spreader and the center of needle when the upper spreader is at the leftmost of its stroke.

3-4 Timing between lower looper and upper spreader

Rotate the machine pulley clockwise and make sure the clearance in front and back is 0.05 - 0.1 mm and also the clearance in left and right is 0.05 - 0.3 mm when the lower looper ③ meets with the upper spreader ④. With those clearances, the timing between the needle and the looper is correct.

3. Adjustment of sewing machine

WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

3-5 Adjustment of lifting amount of presser foot

Maximum lifting amount of presser foot is 3.5 mm.

1. Loosen the lock nut① and turn the screw② clockwise.
2. Loosen the screws④ and ⑤ on the stopper③ of presser foot.
3. Push down the presser foot lever⑥ and make its bottom surface to be in parallel with the stitch plate and place the presser foot 3.5 mm above the top surface of stitch plate.
4. With the presser foot is lifted up 3.5 mm, apply the screw② to the bottom surface of the lever⑦ of presser foot bar.
5. Tighten the lock nut①.
6. With the presser foot is lifted up 3.5 mm, make the clearance of 0.2 mm between the presser foot arm⑧ and the stopper③.
7. Tighten the screws④ and ⑤ for the stopper③.

4 . Specifications

Model	AZ6004G
Dimensions	380(L) × 245(W) × 310(H) mm
Weight	26.5kg
Construction	Dust-proof, Oil-tight and Completely Sealed
Stitch Type	503
Application	Overlock stitch sewing with abutted seam
Sewing Speed	Up to 5,500 s.p.m.
Stitch Length	1.0 - 4.0 mm
	6.5 - 25 stitches per inch
	7.5 - 30 stitches per 30 mm
Needle System	DC×1, Size 75 - 90 (#11 - 14)
Needle Stroke	25.7 mm
Presser Foot Lift	3.5 mm (max.)
Adjustment of Feeding Mode	Push Button System
Differential Ratio	Normal Differential (Gathering) 1 : 2.3 (max.)
	Reverse Differential (Stretching) 1 : 0.7 (max.) (1 : 0.6 is available by adjusting the position of lever pin on main feed dog)
Adjustment of Differential Feeding	Adjustment during the rotation is also available by lifting and lowering the lever.
Knives for Cutting Fabric	Lower Knife : Flat Type, made of Special Steel
	Upper Knife : Flat or Angled Type, made of Super Hard Alloy
Lubrication	Automatic Lubrication System (Forced fed by Trochoide-shaped Pump)
Lubrication Oil	YAMATO SF OIL No.28
Capacity of Oil Reservoir	900cc
Installation	Table top type
	Fully-submerged type / Semi-submerged type
